

Change of the Arkansas Stone Handled by DISCO

Introduction

The Arkansas stone, which is a dedicated tool for polishing surface of metal or ceramics, has been listed on lineup of standard/optional accessory for each model. Please be notified that we change its material from natural stone to synthetic stone which we have originally developed.

It has been difficult to procure the conventional natural Arkansas stone stably, and that caused inconvenience to the customers since we could not meet the customer's need to designate the delivery. We have developed the new product ensuring a stable supply to prepare for the depletion of natural Arkansas stone.

We requested the evaluation for several customers using the Arkansas stone for about half a year. As a result, since we received favorable evaluation, we decided to implement complete change to the DISCO's original product.

Applicable models

All models

Applicable tool for the change

[Conventional product]

Natural Arkansas stone

Name: Leveling stone
Size: 100 × 25 × 13 mm

Schedule for the change

From the shipment of November 2021, the change to the DISCO's original product is implemented.

For the orders after this newsletter is issued, the DISCO's original product is automatically shipped. If you would like the conventional natural Arkansas stone, please contact your local DISCO sales representative or customer engineer. Please note that it may take a longer period of time than before for delivery.

Inquiries

Please contact your local DISCO sales representative or customer engineer if you have any questions regarding this matter.
